

Roshan Akther

Aspiring Software Engineer / Developer

roshanlegend3@gmail.com | linkedin.com/in/roshan-akther-6a12b037b | github.com/Roshan-Dev-0725 | Vavuniya, Sri Lanka

PROFESSIONAL SUMMARY

BICT undergraduate at the University of Vavuniya with hands-on experience building web, data-analysis and computer-vision projects across Python, Java, C, C++ and C#. Comfortable picking up new tools independently, drawn to solving real, everyday problems with practical, lightweight technology, and looking for an internship or entry-level developer role to grow as a software engineer.

EDUCATION

Bachelor of Information and Communication Technology (BICT)

University of Vavuniya — Faculty of Technological Studies, Dept. of ICT

Relevant coursework: Programming (Java, Python, C/C++, C#), Data Structures & Algorithms, Database Systems, Web Technologies, System Analysis & Design, Data Science Fundamentals.

TECHNICAL SKILLS

Languages	Java, Python, C, C++, C#
Web	HTML5, CSS3, JavaScript
Data / Tools	Pandas, Matplotlib, Seaborn, Jupyter Notebook, Google Sheets (as data store)
Other	Git & GitHub, MediaPipe, WebRTC, VS Code

Soft skills: self-directed learning, problem-solving, adaptability, teamwork, clear communication.

PROJECTS

Web-Based OPD Token & Time Management System

Designed a lightweight web system so patients at a village government hospital can view doctors on duty, generate an OPD token online and see their expected consultation time, cutting unnecessary waiting-room crowding. Built with HTML, CSS, JavaScript and Google Sheets as a low-cost database suited to limited infrastructure.

Hand Gesture Controlled Browser Game

Built a browser game controlled entirely by webcam hand gestures (open hand to jump, fist to duck) using MediaPipe for real-time hand tracking, HTML5 Canvas for rendering and WebRTC for camera access; responsive across desktop and mobile with no installs required.

VavuniyaShoeMart — E-Commerce Website

Developed and deployed a front-end e-commerce site for a shoe store concept, covering product listing, layout and responsive navigation. Live at roshan-dev-0725.github.io/VavuniyaShoeMart/

IPL Match & Batting Data Analysis (2015–2023)

Independent exploratory data analysis of IPL matches and batting stats using Python, Pandas, Matplotlib and Seaborn in Jupyter Notebook; surfaced team win trends, toss-decision patterns and top-scorer/strike-rate insights beyond tutorial-level analysis.

EXPERIENCE & ACTIVITIES

Independent Learner — Python & Data Science

Self-started Python learning track including a Password Generator mini-project (functions, the random module, string handling, loops) as a first step before moving into data analysis and computer-vision projects.

Smart Dustbin — IoT Team Project

Contributed to a sensor-based smart dustbin that monitors waste levels and alerts when it needs emptying, aimed at preventing overflow and supporting smart-city sanitation.

CAREER OBJECTIVE

To secure an internship or entry-level software engineering role where I can apply my programming foundations, keep learning new tools through real projects, and grow into a dependable, problem-solving developer.
